***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, 19-20, drawn to an optical scanner having a pair of optical detecting units being mounted onto the housing through an intermediate member, classified in class 347, subclass 257.
  - II. Claims 6-13, 21, drawn to an optical scanner having an optical detecting unit disposed such that a displacement is allowed along the optical path of the synchronous detecting beam, classified in class 347, subclass 257.
  - III. Claims 14-18, 22, drawn to an optical scanner whose housing includes cooling fins located near the optical detecting units, classified in class 347, subclass 242.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are distinguished over the structural disposition of the optical detecting units of an optical scanner. The Invention I claims a pair of optical detecting units being fixed to the optical housing of the scanner through an intermediate member having a thermal expansion coefficient smaller than that of the optical housing such that the generation of heat has a small effect on the relative position of the optical detecting units. The Invention II is focused on the relative

displacement of the optical detecting unit, which is mounted on the optical housing of the scanner in such a way that the displacement due to the thermal deformation of the housing is along the optical path of the synchronous detecting beam. The Invention III is drawn to an optical scanner comprising a housing provided with cooling fins located near the optical detecting units.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. A telephone call was made to the Attorney Joseph A. Scafetta, Jr. on October 6, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
